

Vacuum Technologies

About EDCO

EDCO was founded in 1994 in response to a growing need for high quality, cost-effective vacuum related automation devices. Since then EDCO has become a leader in industrial vacuum technology design, expanding their product line of vacuum components to include a wide range of vacuum pumps, pads, generators, check valves, grippers and suction cups.

EDCO Vacuum Pumps include anodised aluminium bodies, stainless steel valve plates, brass ejector nozzles and stainless steel fasteners. Over 800 models are available in the range to suit your needs.
